

GRILLE CLOTH INSTALLATION INSTRUCTIONS

1. Staple every inch across the top, pulling the fabric so the cross threads are parallel to the ground. (A little tricky to do if you have a slanted or curved top).
2. Staple down one side every inch, top to bottom, pulling the fabric so the vertical threads are straight up and down.
3. Staple down the other side every inch, pulling gently to remove wrinkles and keep the cross threads straight.
4. Staple across the bottom every inch, pulling gently to remove any sags.
5. The fabric will continue to shrink and will eventually pull taut. This is the reason for staples every inch. If you put staples every 3 or 4 inches you will get scalloped edges sooner or later.
6. Anything that touches the back of the fabric will eventually show up as a shadow. Any cross bracing on the frames must be kept at least 1/2" away from the fabric.
7. Depending on the nature of the lighting on the fabric, objects behind the fabric may be seen, particularly if light colored or reflective. This is less noticeable if the lighting comes straight down across the fabric rather than hitting it at an angle.
